Subject: Manuscript submission to BMC Bioinformatics

Dear Editor,

Thank you for considering our manuscript, "*PoolParty: streamlined design of DNA sequence libraries in Python*," for publication as a Software Article in BMC Bioinformatics. As requested, the "Data availability" section of the SNAPP submission system has been updated to include the text of the "Availability of Data and Materials" section of the manuscript, namely:

No experimental data were generated or analyzed in this study. The sequence and software used in the paper were obtained from public sources referenced in the manuscript: the GB1 coding sequence from Olson et al. (2014); the MPRA backbone, TFBS sequences, and inert background sequence from Melnikov et al. (2012) and Georgakopoulos-Soares et al. (2023); the SMN2 exon 7 genomic context from GRCh38.p13 (RefSeq assembly accession GCF_000001405.39); the human 5' splice-site position weight matrix from Wong et al. (2018); MaxEntScan from Yeo and Burge (2004); and the pretrained SpliceAI model ensemble from Jaganathan et al. (2019).

Sincerely,

Justin B. Kinney, PhD
